PROFESSIONAL SERIES WINDOWS & DOORS

Series 7000 Sound Suppression Windows

ModernView Sound Suppression Windows represent the most sophisticated technology available in sound control windows. This technologically advanced window delivers cutting edge sound suppression, outstanding thermal efficiency and the aesthetic beauty and maintenance free qualities of premium vinyl windows.

ModernView Sound Suppression Windows can be designed with an STC/EWR rating to meet most acoustical requirements, enabling you to deliver windows that meet the requirements of your customers.

- Unique, beveled frame design, shown here with an available mounting flange, gives a more streamlined and crafted appearance rather than the "boxy" look of alternative sound control products
- Designed and engineered with the placement and thickness of the glass optimized to provide the maximum in sound reduction
- Inner secondary glazing panel accepts up to 1/4" laminated glass for use where highest noise levels are encountered
- The pocket sill features a dual-weep/drainage system that weeps water away from the window while reducing air and dust penetration

- Provides comforting security and keeps sash units tight and secure to seal out weather
- Designed for easy operation, the integral lift rails allow easy opening and closing of the window
- Full-length interlocking meeting rails reduce air and water infiltration and add structural integrity to both inner and outer sash systems
- Extra-thick vinyl walls in main frame and sash add strength and stability

Model 7100 Single-Hung is pictured. Companion horizontal slider and picture windows are also available.
